Portfolio| LinkedIn | GitHub

PROFESSIONAL SUMMARY

Detail-oriented Computer Science student with strong knowledge of C, Python, data structures, and algorithms. Demonstrated problem-solving ability through academic projects and coursework. Familiar with software development fundamentals and eager to build scalable and efficient applications. Looking to start a career in software development**.**

EDUCATION

Bachelor of Engineering (B.E) – Computer Science & Engineering
Visvesvaraya Technological University (VTU) | **CGPA: 8.61/ 10**
Year of Graduation: 2026

Pre-University (Class XII) – Karnataka State Board | 79.62%
Secondary School (Class X) – Karnataka State Board | 85.92%

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL
- **Backend:** RESTful API Design
- **Web & Frontend:** HTML, CSS, JavaScript
- **Databases:** MySQL, Oracle
- **Tools & Platforms:** Git & GitHub, VSCODE, Windsurf, Cursor, Vercel
- **Methodologies:** Agile Methodology, Project Management
- **Cloud Computing:** AWS

INTERNSHIP WORK EXPERIENCE

Software Development Intern | Python Full Stack

Feb 2026 – Present (Expected completion: Jul 2026)-KodNest

- Developing scalable web applications and backend services using Python and modern web technologies.
- Designing and implementing RESTful APIs, ensuring efficient data handling and seamless client-server integration.
- **Technologies:** Python, Django/Flask, HTML5, CSS3, JavaScript, SQL

PROJECTS

AI Driven Farming Support System (Final Year Project) 6/2025-12/2025

- Architected an AI-driven smart agriculture system combining predictive analytics and image processing, achieving ~85% recommendation accuracy.
- Improved crop efficiency (+30%), enabled early disease detection (~80%), and reduced resource wastage by 25% through data-driven optimization.
- Delivered a scalable, intelligent solution enhancing agricultural productivity and sustainability.

Detection of Drowsy Driver in Real Time using Python 3/2024 – 5/2024

- This project works by detecting when a person starts feeling sleepy, especially while doing tasks like driving. It uses a camera to watch the person's eyes and face.

- If it notices signs of drowsiness, like eyes closing often or the head nodding it sends an alert, such as a sound or message, to wake the person up and help prevent accidents.

CERTIFICATIONSB & HACKATHONS

- **Python 101 for Data Science |** IBM Developer Skills Network
- **SQL and Relational Databases 101|** IBM Developer Skills Network
- **AWS BOOTCAMP|**VTU University
- **Winner – Mini Hackathon | Government Engineering College, Talakal**

➢ Secured **1st Place** in a competitive hackathon featuring **CSS Battle and Python debugging challenges**.
➢ Demonstrated expertise in front-end design precision and backend problem-solving under time constraints.
➢ Applied strong analytical thinking to efficiently identify and resolve code issues in a high-pressure environment.

- **Hackathon Participant – Hack Abhigna|** Adichunchanagiri Institute of Technology.

➢ Developed a predictive lead optimization solution using full-stack analytics and agent-based workflows.
➢ Demonstrated strong problem-solving and teamwork in a 24-hour competitive environment.
